

Toxic Exposure Committee Report  
Submitted by Nancy Switzer

Research on Biological Descendants of  
Veterans Exposed to Toxic Substances

The proposed legislation advocates for comprehensive research into the health effects on the biological descendants of veterans exposed to toxic substances, such as Agent Orange and burn pits. It mandates the VA and related agencies to study potential genetic and health impacts, to establish data protocols, and report findings to Congress. This initiative seeks to address generational health risks, honor veterans' sacrifices, and provide vital information for public health interventions.

The above needs to be addressed, by our members of AVVA. We are asking you, our members, to call their constituents and get them motivated to know your concerns on the exposure issues our children experienced with their parent exposure to chemicals.

I was quite excited to hear that John Stovell and Jim Kuhn is taking four (4) board members on the Hill. To visit with their congressional constituents this coming board of directors meeting.
